The 1930 Edition of Type Specimens contains faces that are more or less in constant present-day use. Reference should be made to previous edition for particulars of other founts.

Monotype *composition* faces (pages 1-52, 90, 91, 103, 122, 128 and 188-192) are distinguished by the letter " M " at end of descriptive line, and Monotype *display* faces by the letters " MD."

Comparative specimens of Capitals and Figures in approximately 12-point face are shown in alphabetical order on pages 188-193.

SELECTED REPRODUCTIONS FROM DISPLAY AND BOOK TYPES, ORNAMENTS AND INITIALS

12-point Old Style. M

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour ; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point ; yet these qualities are essential as a foundation if we want to

It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes also the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's physical development and health upon the boy himself, therefore we show the boy what should be his weight and measurements for his age, and by what self-treatment he can remedy defects, and we encourage it by periodical measurements. This provides identically a further step in character training, and can be of valuable assistance to the Education Authorities in completing their authority of physical training. The various branches work in close co-operation with the Education Authorities, and are of value in encouraging lads to continue their education in technical and continuation schools, and in keeping them under good influences at the most critical period of their lives. The out-of-doors games and exercises are mainly designed for physical development, and also there is an attractiveness about them that appeals to the more adventurous spirits amongst the girls, who will then go on to learn the various useful and essential handicrafts whilst becoming imbued with the ideals of womanliness and the higher attributes of women. To put women on a better standing as citizens than they have been heretofore—on terms of comradeship rather than dependency—by developing

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is

Cheery, healthy enjoyment and happy comradeship should be the principle, as being the best preventive to possible inefficiencies. The development of the individuality of the girl is one of the essential points. One of the many unlooked-for results of the War was the discovery of the national value of women's work, and the future before us of building up our resources gives us at once a unique opportunity as well as a very great duty and responsibility to the women of the country. For such responsibilities it is essential that the rising generation of female citizens should receive a very special training in character and efficiency on a standard designed to meet the need of the future, and on lines very different from those which have sufficed for the past; this is acknowledged on all sides. As a step to this end, however, the movement was inaugurated very much on the lines of those of other training, though differing in details, where, by an attractive scheme of work and play, the young citizeness is encouraged to develop in herself the qualities which tend to the greatest national efficiency. The movement grew naturally from its first inception, through its own appeal to the girls, and every

Cheery, healthy enjoyment and happy comradeship should be the principle, as being the best preventive to possible inefficiencies. The development of the individuality of the girl is one of the essential points. One of the many unlooked-for results of the War was the discovery of the national value of women's work, and the future before us of building up our resources gives us at once a unique opportunity as well as a very great duty and responsibility to the women of the country. For such responsibilities it is essential that the rising generation of female citizens should receive a very special training in character and efficiency on a standard designed to meet the need of the future, and on lines very different from those which have sufficed for the past; this is acknowledged on all sides. As a step to this end, however, the movement was inaugurated very much on the lines of those of other training, though differing in details, where, by an attractive scheme of work and play, the young citizeness is encouraged to develop in herself the qualities which tend to the greatest national efficiency. The movement grew naturally from its first inception, through its own appeal to the girls, and every worker and member has joined voluntarily in its promotion. The scheme is carried out as complementary to, and in co-operation with, the scholastic training of the schools. The results have already pointed to this being a practical means to an end, and nearly half a million girls are undergoing the voluntary training with the happiest results. When first the movement was started there was in some places the somewhat mistaken impression that the training was likely to make "tom-boys" of the girls, and I should much like to dispel that idea. The members left at home during the War have carried on their troops, which have generally increased in numbers and efficiency in spite of the difficulties of the times. They have also carried out a large amount of war work for the different public departments—duties of various kinds, including coast-watching under the Admiralty, orderly and messenger work for the War Office, air-raid duty with the police, work on the land under the Ministry of National Service, and minor duties of many kinds. By each doing a day's work and giving the proceeds to a Fund (for no begging, touting, or flag-day methods were allowed), members of this great organisation raised enough to supply, equip, and maintain five recreation huts, and seven holiday or rest homes, situated amongst carefully chosen typical English homelands, when one and all, under a competent guide, immediately abandon all conventionalities, and later on bring back to the crowded cities anecdotes and memories that will live long and often awaken some unconscious ideas, and most probably be reflected in future life. In the past many plans and laboured efforts have been tried, and sometimes the

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour ; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point ; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes also the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's physical development and health upon the boy himself, therefore we show the boy what should be his weight and measurements for his age, and by what self-treatment he can remedy defects, and we encourage it by periodical measurements. This provides identically a further step in character

To put women on a better standing as citizens than they have been heretofore—on terms of comradeship rather than dependency—by developing Character, Handicrafts, Sense of Duty and Honour, Self-control and Mental Balance. The education is through games and practices such as really appeal to the girl—the girl of every age and creed, grade and kind; it is a system of elder and younger sisters playing games together rather than the instruction of privates by officers in a cut-and-dried disciplinary machine, or of pupils by school teachers in an academic curriculum. Cheery, healthy enjoyment and happy comradeship should be the principle, as being the best preventive to possible inefficiencies. The development of the individuality of the girl is one of the essential points. One of the many unlooked-for results of the War was the discovery of the national value of women's work, and the future before us of building up our resources gives us at once a unique opportunity as well as a very great duty and responsibility to the women of the country. For such responsibilities it is essential that the rising generation of female citizens should receive a very special training in character and efficiency on a standard designed to meet the need of the future, and on lines very different from those which have sufficed for the past; this is acknowledged on all sides. As a step to this end, however, the movement was inaugurated very much on the lines of those of other training, though differing in details, where, by an attractive scheme of work and play, the young citizeness is encouraged to develop in herself the qualities which tend to the greatest national efficiency. The movement grew naturally from its first inception, through

The school education stops short at this important point ; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes also the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's physical development and health upon the boy himself, therefore we show the boy what should be his weight and measurements for his age, and by what self-treatment he can remedy defects, and we encourage it by periodical measurements. This provides identically a further step in character training, and can be of valuable assistance to the Education Authorities in completing their authority of physical training. The various branches work in close co-operation with the Education Authorities, and are of value in encouraging lads to continue their education in technical and continuation schools, and in keeping them under good influences at the most critical period of their lives. The out-of-doors games and exercises are mainly designed for physical development, and also there is an attractiveness about them that appeals to the more adventurous spirits amongst the girls, who will then go on to learn the various useful and essential handicrafts whilst becoming imbued with the ideals of womanliness and the higher attributes of women. To put women on a better standing as citizens than they have been heretofore—on terms of comradeship rather than dependency—by developing Character, Handicrafts, Sense of Duty and Honour, Self-control and Mental Balance. The education is through games

To put women on a better standing as citizens than they have been heretofore—on terms of comradeship rather than dependency—by developing Character, Handicrafts, Sense of Duty and Honour, Self-control and Mental Balance. The education is through games and practices such as really appeal to the girl—the girl of every age and creed, grade and kind; it is a system of elder and younger sisters playing games together rather than the instruction of privates by officers in a cut-and-dried disciplinary machine, or of pupils by school teachers in an academic curriculum. Cheery, healthy enjoyment and happy comradeship should be the principle, as being the best preventive to possible inefficiencies. The development of the individuality of the girl is one of the essential points. One of the many unlooked-for results of the War was the discovery of the national value of women's work, and the future before us of building up our resources gives at once a unique opportunity as well as a very great duty and responsibility to the women of the country. For such responsibilities it is essential that the rising generation of female citizens should receive a very special training in character and efficiency on a standard designed to meet the need of the future, and on lines very different from those which have sufficed for the past; this is

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour ; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point ; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's physical development and health upon the boy himself, therefore we show the boy what should be his weight and measurements for his age, and by what self-treatment he can remedy defects, and we encourage it by periodical measurements. This provides identically a further step in character training, and can be of valuable assistance to the Education Authorities in completing their authority of physical training. The various branches work in close co-operation with the Education Authorities, and are of value in encouraging lads to continue their

To put women on a better standing as citizens than they have been heretofore—on terms of comradeship rather than dependency—by developing Character, Handicraft, Sense of Duty and Honour, Self-control and Mental Balance. The education is through games and practices such as really appeal to the girl—the girl of every age and creed, grade and kind; it is a system of elder and younger sisters playing games together rather than the instruction of privates by officers in a cut-and-dried disciplinary machine, or of pupils by school teachers in an academic curriculum. Cheery, healthy enjoyment and happy comradeship should be the principle, as being the best preventive to possible inefficiencies. The development of the individuality of the girl is one of the essential points. One of the many unlooked-for results of the War was the discovery of the national value of women's work, and the future before us of building up our resources gives us at once a unique opportunity as well as a very great duty and

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports

It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes also the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's physical development and health upon the boy himself, therefore we show the boy what

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers

In addition to improved methods in education there is generally a great want of some

6-point Lining Booklet.

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet these qualities are essential as a foundation if we want to make our nation capable of holding it own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes also the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's physical development and health upon the boy himself, therefore we show the boy what should be his weight and measurement for his age, and by what self-treatment he can remedy defects, and we encourage it by periodical measurements. This provides

It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes also the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's physical development and health upon the boy himself, therefore we show the boy what should be his weight and measurements for his age, and by what self-treatment he can remedy defects, and we encourage it by periodical measurements. This provides identically a further step in character training, and can be of valuable assistance to the Education Authorities in completing their authority of physical training. The various branches work in close co-operation with the Education Authorities, and are of value in encouraging lads to continue their education in technical and continuation schools, and in keeping them under good influences at the most critical period of their lives. The out-of-doors games and exercises are mainly designed for physical development, and also there is an attractiveness about them that appeals to the more adventurous spirits amongst the girls, who will then go on to learn the various useful and essential handicrafts whilst becoming imbued with the ideals of womanliness and the higher attributes of women. To put women on a better standing as citizens than they have been heretofore—on terms of comradeship rather than dependency—by developing Character, Handicrafts, Sense of Duty and Honour, Self-control and Mental Balance. The education is through games and practices such as really appeal to the girl—the girl of every age and creed, grade and kind; it is a system of elder and younger sisters playing games together rather than the instruction of privates by officers in a cut-and-dried disciplinary machine, or of pupils by school teachers in an academic curriculum. Cheery, healthy enjoyment and happy comradeship should be the principle, as being the best preventive to possible inefficiencies. The development of the individuality of the girl is one of the essential points. One of the many unlooked-for results of the War was the discovery of the national value of women's work, and the future before us of building up our resources gives us at once a unique opportunity as well as a very great duty and responsibility to the women of the country. For such responsibilities it is essential that the rising generation of female citizens should receive a very special training in character and efficiency on a standard designed to meet the need of the future, and on lines very different from those which have sufficed for

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes also the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's

In addition to improved methods in education there is generally a great want of some practical form of character training. The need of this is recognised and felt in almost every line of life. Employers complain of it and those interested in education are alive to it, and are endeavouring to find methods for occupying the want. The boys equally show a want of discipline of the better kind, that is, of discipline derived from a sense of duty rather than from a fear of punishment, and a want of self-discipline and control with a sense of honour; these and many other attributes seem in many cases left to develop or to atrophy in the boy. It is difficult for the schoolmasters to correct these faults, as they are so much a matter of environment outside the school walls. The school education stops short at this important point; yet these qualities are essential as a foundation if we want to make our nation capable of holding its own with others. On the outbreak of war some seventy per cent. of our officers and older boys voluntarily enlisted, and reports received from their commanding officers, and the record of promotions and decorations received, go to prove that the movement, though designed to make citizens, makes also the best possible soldiers and sailors for the service. Our aim is to put the responsibility of the boy's physical development and health upon the boy himself, therefore we show the boy what should be his weight and measurements for his age, and by what self-treatment he can remedy defects, and we encourage it by periodical measurements. This provides identically a further step in character training, and can be of valuable assistance to the Education Authorities in completing their authority of physical training. The various branches
